KEY TECHNICAL

JavaScript (8+ yrs)	TypeScript (6+ yrs)	React (7+ yrs)	Next.js (4+ yrs)	Node.js (7+ yrs)	NestJS (5+ yrs)
Databases (7+ yrs)		CRM / CMS (5+ yrs)		Clouds / Cloud native tooling (6+ yrs)	

EXPERIENCE

Freelance | Senior Frontend Engineer

March 2026 — May 2026

Project: Developed and maintained Sitecore XM Cloud-compatible frontend components using Next.js, LESS, and the BEM methodology, ensuring high scalability, maintainability, and consistency across the design system. Built reusable, CMS-driven components that could be configured and managed through Sitecore, enabling content editors to create flexible page layouts without additional development effort.

Responsibilities:

- Developed and maintained UI components to deliver a polished, consistent user experience;
- Supported product backlog prioritization by assessing effort/impact and aligning tasks with project goals;
- Participated in scoping, stand-ups, and backlog grooming to provide technical input and improve delivery predictability;

EPAM Systems | Senior Software Engineer

November 2024 — March 2026

Project: Enterprise platform for benchmarking and comparing Large Language Models, with trial inference endpoints for Generative AI experimentation. Enables stakeholders to evaluate model capabilities against consistent benchmarks and select the best-fit LLM for specific use cases (e.g., NLP workflows, customer support automation, content generation, and data analysis).

Responsibilities:

- Developed and maintained UI components to deliver a polished, consistent user experience;
- Supported product backlog prioritization by assessing effort/impact and aligning tasks with project goals;
- Contributed to technical direction by recommending best practices and reinforcing coding standards;
- Participated in scoping, stand-ups, and backlog grooming to provide technical input and improve delivery predictability;

Project: Entails migrating or reimplementing legacy components to the XM Cloud platform.

Responsibilities:

- Migrate a Sitecore 9.2-based website to Sitecore XM Cloud with a headless front-end built on Next.js;
- Ensuring data integrity and consistency throughout the migration process;
- Troubleshooting and resolving migration-related issues;
- Collaborating with team to align data requirements with business needs.

Project: Web Migration from legacy Umbraco & Magento to Vercel & Contentful.

Responsibilities:

- Data migration from various sources into Contentful CMS;
- Ensuring data integrity and consistency throughout the migration process;
- Optimizing data structures for efficient content management;
- Automating migration workflows to enhance scalability and reliability;
- Troubleshooting and resolving migration-related issues.
- Collaborating with team & stakeholders to align data requirements with business needs.

Genie Platforms | Senior Software Engineer

August 2024 — November 2024

Project: AI-Powered Conversations That Convert. For Sales, RevOps, and Go-to-Market Teams Ready to Scale Smarter. Experience the power of Genie, your 24/7 Al Sales Development Representative, at a fraction of the cost of a human SDR.

Responsibilities:

- Product requirements analysis & tech-solution proposal composition;
- Technical decision-making;
- Roadmap composition & commitment;
- Designing server-side architectures (microservices);
- Third-party service integration;
- Developing efficient APIs;
- Managing databases;
- Stakeholder communication;
- Supporting teammates with technical guidance;
- Aligning engineering efforts with business goals.

Mindshine Technologies | Full-stack Developer

December 2023 — August 2024

Project: TIVA is a powerful AI platform that enables voice and text retrieval technologies. Delivering your data to any device. Allowing end users to access to data regardless of data source. Grow at your own pace by adding or expanding data access easily and securely. Do this with TIVA Data and TIVA Knowledge Base.

Responsibilities:

- Development of the client and server parts of the application;
- Assisting with technical direction and best practices;
- Troubleshoot and debug to optimize performance;
- Collaborate with the team to define, design, and ship new features.

RocketParts LLC | Senior Software Engineer

October 2023 — November 2023

Project: Zentact is a fully managed, out-of-the-box, Software as a Service (SaaS) platform for enabling payments to your customers. Zentact provides everything you need to manage your payfac solution, in a simple and easy-to-use solution. Save months of custom development and high costs. Get started with just a few days of integration.

Responsibilities:

- Developing user interfaces;
- Assisting in product strategy;
- Assisting in prioritizing the product backlog;
- Assisting with technical direction and best practices;
- Participating in scoping, stand-up, and grooming meetings.

The Rolling Scopes School | Mentor

October 2020 — December 2023

Responsibilities:

- Teaching students the fundamentals of software development using JavaScript and its associated environment;
- Organizing weekly meetups with student groups to answer questions and share experiences;
- Checking and evaluating student work, conducting training interviews, and delivering additional lectures.

Andersen | Full-stack Developer

September 2022 — March 2023

Project: A modern student accommodation platform offering fully serviced living spaces with flexible apartment options for both individual and shared lifestyles.

Responsibilities:

- Analyzing requirements, planning, identifying necessary resources, and conducting risk

analysis;

- Designing server-side architecture;
- Developing efficient APIs;
- Decomposition and estimation of tasks (epics, stories, features);
- Exercising control over the deployment, delivery, and code sharing processes;
- Ensuring adherence to security rules, and maintaining quality assurance for existing code;
- Facilitating cross-team integration communications;
- Maintenance of documentation;
- Direct client communication;
- Code review.

Anadea Inc. | Full-stack Developer

May 2021 — September 2022

Project: An ecosystem that provides all the necessary tools to assist the leadership, teachers and students in focusing on their learning and development journey. The platform offers a learning experience that is dynamically optimized to suit your purposes.

Project: The platform that is a market-leader at generating professional-grade questions, answers and metadata from all kinds of content.

Responsibilities:

- Designing client-side and server-side architectures;
- Decomposition and estimation of tasks (epics, stories, features);
- Creating complex, dynamic interfaces with intricate logic and dependencies;
- Developing efficient APIs;
- Managing databases;
- Ensuring cross-platform optimization & test coverage;
- Facilitating cross-team integration communications;
- Maintenance of documentation;
- Direct client communication;
- Conducting technical interviews;
- Code review.
- Mentoring.

INTELICO | Frontend Developer

February 2020 — May 2021

Project: Fully customizable, turnkey solution for end-to-end lead generation. Used to capture, validate, and distribute leads in real-time through a convenient SaaS.

Project: A Point-of-Sale Multi-Lender Financing Solution. It connects in-store customers to lenders offering buy now pay later options.

Responsibilities:

- Decomposition and estimation of tasks (epics, stories, features);
- Developing complex, dynamic interfaces with intricate logic and dependencies;
- Ensuring cross-platform optimization & test coverage;
- Maintenance of documentation;
- Facilitating cross-team integration communications;
- Conducting technical interviews;
- Mentoring developers.

Freelance | Full-stack Developer

February 2017 — February 2020

Project: A platform for renting construction equipment and specialized machinery.

Project: A platform that enables betting on personal and other matches in online games. Earn money with your gaming skills. Play. Bet. Win.

Project: Website offering audio guides for the Spanish island of Lanzarote. Unleash Lanzarote's beauty with our audio guides. Explore, learn, and enjoy the island's treasures at your fingertips.

Responsibilities:

- Product requirements analysis & tech-solution proposal composition;
- Roadmap composition & commitment;
- Designing client-side and server-side architectures;
- Developing complex, dynamic interfaces with intricate logic and dependencies;
- Developing efficient APIs;
- Managing databases;
- Direct client communication.
